Octo: an AI teammate on every call

Note-takers record the meeting. **Octo takes part in it** and keeps the work moving after.

Oleksii Nikitin · Octocrew

THE PROBLEM

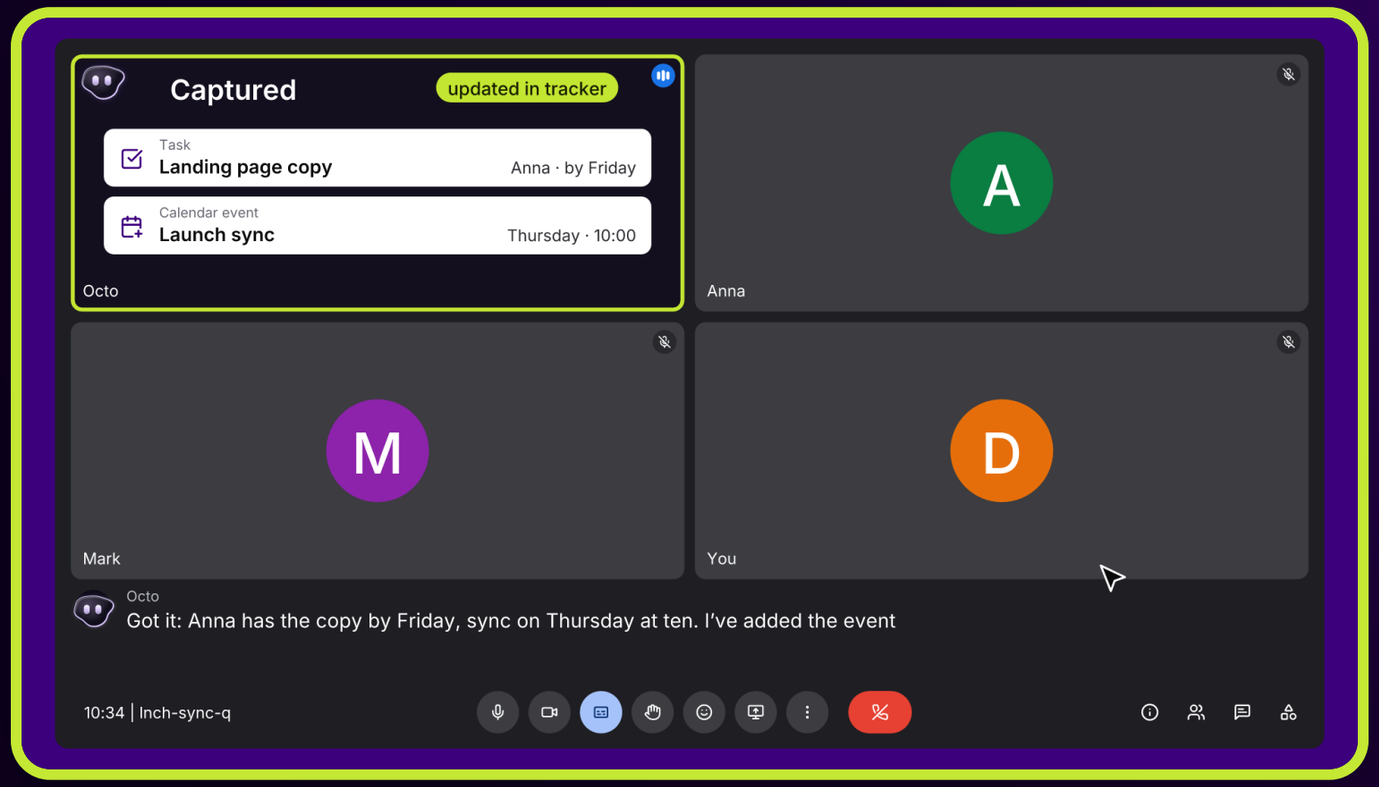

Every call ends with: “so who’s doing what?”

01 **Someone has to take notes**
and they still miss things, while not really taking part

02 **Agreements slip between calls**
the same status questions come back every week

03 **The task tracker goes stale the day after**
nobody updates it when plans change out loud

AI note-takers record the call. Nobody acts on it.

LIVE DEMO

Let's ask Octo

- It joins Google Meet like any participant
- You talk to it like a colleague
- It answers, shows it on its tile and acts

Backup: 35-second video

WHAT OCTO DOES

One agent around every call

BEFORE

Brief

- who’s attending
- what was discussed last time
- what’s still open

DURING

Takes part

- **speaks when called on**, by name
- answers from your **knowledge base and CRM**, searches **the web**
- shows answers on its own tile
- books events in the calendar

AFTER

Acts

- everyone gets **their tasks by DM**, with the exact quote
- tasks land in **your tracker** and update when someone says “done”
- a page for every meeting
- a weekly task review by voice

Meet · Teams · Zoom · Slack Huddles · Webex · GoTo. Your agent’s name, your voice.

THIS WEEKEND

Help me launch it

Who I’m looking for

- Growth marketer
- Brand & design
- Content & video
- Landing / no-code builder
- Sales mind
- Anyone who hates taking notes

Open questions we’ll answer together

- ? Who do we sell to first?
- ? How do we stand out from note-takers that start to speak too?
- ? Octo, or each customer’s own named agent?
- ? Price and model: seat, team, usage?
- ? Can every call be the growth loop?

The product works today. The launch is what we build together.

BACKUP · ROUGH LANDSCAPE

TO VERIFY AT THE HACKATHON

Who’s already in the meeting

GROUP	EXAMPLES	SPEAKS IN THE CALL	ACTS AFTER THE CALL	PRICE BALLPARK
AI note-takers	Otter, Fireflies, Fathom, Read.ai, Granola, tl;dv, Fellow	**a few, by wake word (“Hey Otter”, “Hey Fireflies”)**	summaries, action items, CRM sync	~$8–30 / seat / mo, free tiers
Built into the platform	Zoom (AI Companion, ZoomMate), Teams Copilot, Gemini in Meet, Notion AI	mostly not	**moving there: follow-ups, tasks in own ecosystem**	bundled or ~$20 / user
Infrastructure	Recall.ai and similar meeting-bot APIs	**lets anyone build it**	—	usage-based
Octo	**one agent on six platforms**	**yes, as a participant, shows on its tile**	**tasks in your tracker, kept up to date; tasks by DM; voice reviews**	**open question**

Speaking is becoming common. The open question: what stays Octo’s?

SOURCES IN THE CHEAT SHEET

Where we could start

Who first

- **Remote agencies, 10–50 people**: many client and team calls, mixed platforms
- **Startup product teams** on Jira or Linear: the tracker is the source of truth
- **Founder-led small businesses** with no project manager

Growth loops to test

- **Every guest sees Octo**: a sign-up link for the people on the call
- **The task DM is the invite**: each person gets value, not just the buyer
- **Integration marketplaces**: Notion, Asana, Slack, Zoom app stores
- **A 30-second clip** of Octo updating a tracker live, for Product Hunt and socials
